PROFESSIONAL SUMMARY

Data Science enthusiast and Computer Science Engineering student with hands-on experience in Python, machine learning, computer vision, and data analytics. Skilled in building data-driven solutions, performing data preprocessing, visualization, and extracting actionable insights. Experienced in projects like sentiment analysis, recommendation systems, and real-world data modeling, with a strong ability to solve problems using ML and CV techniques.

EDUCATION

B.E. in Computer Science and Engineering – DMI College of Engineering, Chennai

Expected Graduation: May 2026

INTERNSHIP & EXPERIENCE

Machine Learning Intern | Larsen & Toubro (L&T) | [February 2025 – May 2025]

- Developed real-time computer vision solutions including PPE detection, crowd monitoring, and OCR-based document processing using deep learning and Tesseract.
- Built end-to-end ML pipelines integrated with SQL Server (SSMS) for efficient data handling, leveraging Python and OpenCV to deliver scalable, production-ready systems.
- Built and automated end-to-end data pipelines, improving efficiency in data processing and analysis workflows.

Data Analyst Intern | CodSoft (Virtual Internship) | January 2025 – February 2025

- Worked on real-world data analysis projects remotely, performing data cleaning, preprocessing, and EDA using Python.
- Used Pandas, NumPy, Matplotlib, and Seaborn to analyze data, visualize trends, and generate actionable insights.
- Built efficient data workflows and pipelines to streamline analysis and support data-driven decision-making.

TECHNICAL SKILLS

Machine Learning & Data Science: Machine Learning, Computer Vision, Model Development

Data Analysis & Visualization: Pandas, NumPy, Matplotlib, Seaborn, Exploratory Data Analysis (EDA), Data Cleaning

Computer Vision & OCR: OpenCV, Tesseract OCR, Image Processing, Object Detection, Crowd Detection, PPE Detection

Programming & Tools: Python, Jupyter Notebook, Git, VS Code

Database & Backend: SQL, SQL Server Management Studio (SSMS), Data Pipelines, Backend Integration

PROJECTS

Resume Analyzer & Builder using NLP | resume-ai-resume-analyzer-resume-bu-three.vercel.app

- Developed an NLP-based system to analyze resumes, extract key information, and match them with job descriptions to identify skill gaps and improve ATS compatibility. Built a resume builder module to generate optimized, structured resumes with actionable content recommendations.

Bitcoin Sentiment Analysis | [https | github.com/AgnesaAntony/SentimentAnalyse](https://github.com/AgnesaAntony/SentimentAnalyse)

- Analyzed social media sentiment data using NLP techniques to identify patterns and trends influencing cryptocurrency market behavior. Performed data preprocessing, EDA, and visualization using Python, Pandas, Matplotlib, and Seaborn to uncover sentiment distribution and key word frequency insights.

Job Detection & Classification | github.com/AgnesaAntony/Python_Project_2

- Analyzed job description datasets to classify roles based on skills using data analysis and EDA techniques. Identified in-demand skills and job trends through data preprocessing and visualization using Python, Pandas, Matplotlib, and Seaborn.
